

# Statement of Volatility – Dell P2423 Monitor

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The Dell P2423 contains both volatile and non-volatile components. Volatile components lose their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following Non-volatile components are present on the Dell P2423 system board.

**Table 1. List of Non-Volatile Components on System Board**

| Description       | Reference Designator | Volatility Description                                          | User Accessible for external data | Remedial Action (Action necessary to prevent loss of data) |
|-------------------|----------------------|-----------------------------------------------------------------|-----------------------------------|------------------------------------------------------------|
| System EEPROM:    | U13                  | Non-Volatile memory, 16Kbit For Storage of system setting (OSD) | No                                | NA                                                         |
| HDMI EDID EEPROM: | U11                  | Non-Volatile memory, 2Kbit For Storage of HDMI EDID             | No                                | NA                                                         |
| System Flash:     | U12                  | Non-Volatile memory, 4Mbit For Storage of system firmware       | No                                | NA                                                         |
| USB HUB Flash:    | U52                  | Non-Volatile memory, 1Mbit For Storage of USB HUB firmware      | No                                | NA                                                         |
