

# Statement of Volatility – Dell E2723H Monitor

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The Dell E2723H Monitor contains both volatile and non-volatile components. Volatile components lose their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following Non-volatile components are present on the Dell E2723H Monitor system board.

**Table 1. List of Non-Volatile Components on System Board**

Description	Reference Designator	Volatility Description	User Accessible for external data	Remedial Action (Action necessary to prevent loss of data)
NOR FLASH GD25Q80CTIGR 8 MB SOP-8 (150 mil)	U4002	Non-Volatile	No	NA
EEPROM M24C02- RMN6TP 2 KB SO-8	U1201	Non-Volatile	No	NA
EEPROM M24C16- WMN6TP 16Kb SOIC-8	U4003	Non-Volatile	No	NA

**CAUTION:** All other components on the system board lose data if power is removed from the system. Primary power loss (unplugging the power cord and removing the battery) destroys all user data on the memory (DDR3, 1067MHz). Secondary power loss (removing the on-board coin-cell battery) destroys system data on the system configuration and time-of-day information.
