WARNING: Safety Instructions

WARNING: Use of controls, adjustments, or procedures other than those specified in this documentation may result in exposure to shock, electrical hazards, and/or mechanical hazards.

Please read safety and instructions for use before operating the device.

Please retain this user's guide for future reference.

For information on safety instructions, see the Safety, Environmental, and Regulatory Information.

Symbols on the Device

Ò	Indicates that the fee has been paid for the recovery of the packaging material in some European countries.
	Indicates that an object is capable of being recycled.

Intended Use

MR2416 is an LCD display intended used for trained physician or practitioners viewing medical images and data in hospital or clinic environment.

The device is neither used for life supporting system, surgical procedure system nor viewing digital mammography images.

Warning

You may get an electric shock if the AC outlet is not grounded properly.

Disconnecting Device

The power cord is the disconnect device for this monitor and is attached to the power adapter as a plug-in device. To remove all electrical power from the monitor, disconnect the power cord from the electrical outlet.

General recommendations

- For continued safe use of this monitor, read the safety and operating instructions before operating the monitor.
- Unplug the AC mains cord to disconnect the mains power.
- Use only the power cord supplied with this monitor.
- Adhere to all warnings on the device and in the operating instructions manual.

Electrical Shock or Fire Hazard

- Connect the AC power cord to a properly grounded power source with the line frequency and voltage specified on the name plate of the power adapter.
- To reduce the risk of electrical shock, DO NOT remove any covers. Refer servicing to qualified personnel only.
- Users must not allow SIP/SOPs and the patient to come into contact at the same time.

Modifications to the unit

No modification of this monitor is allowed.

Type of protection (electrical)

Monitor with external power adapter: Class I equipment.

Explosion Hazard

Do not use this monitor in the presence of flammable materials.

Power connection - Monitor with external +19VDC power adapter

- Power requirements: The monitor must be powered using the accompanied medical- approved power adapter.
- The medical-approved power adapter must be powered by AC mains power.
- The power adapter is specified as a part of the monitor.

Power cord

- Do not use extension cords as this may result in fire or electric shock.
- Use the power cord that is supplied with the monitor only.

Connection of External Equipment

- External equipment intended for connection to signal input/output or other connectors, shall comply with relevant UL/EN/IEC standard (e.g. UL/EN/IEC 60950 for IT equipment and UL/EN 60601-1/IEC 60601 series for medical electrical equipment).
- In addition, all such combinations -systems- shall comply with the standard IEC 60601-1-1, safety requirements for medical electrical systems.
- Equipment not complying with UL/EN/IEC 60601-1 shall be kept outside the patient environment, as defined in the standard.

Water and Ingress protection

This monitor complies with IP32 against the intrusion into the monitor of foreign materials. Do not expose the monitor to water or moisture.

Regulatory compliance information

INDICATION FOR USE

MR2416 is an LCD display intended used for trained physician or practitioners viewing medical images and data in hospital or clinic environment.

The device neither be used for life supporting system, surgical procedure system nor viewing digital mammography images.

FCC Information

Federal Communications Commission (FCC) Notice (U.S. Only) WARNING: This equipment has been tested and found to comply with the limits for a digital device, pursuant to Part 15 Class B of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 Class B of the FCC rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received including interference that may cause undesired operation.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

CANADIAN NOTICE

This ISM device complies with Canadian ICES-003. Cet appareil ISM est conforme à la norme NMB-003 du Canada.

EMC notice

Electromagnetic emissions

The MR2416 is intended for use in the electromagnetic environment specified below. The customer or the user of the MR2416 should assure that it is used in such an environment.

Emissions test	Compliance	Electromagnetic environment - Guidance	
RF emissions CISPR 11	Group 1	The MR2416 uses RF energy only for its internal function.	
		Therefore, its RF emissions are very low and are not likely to cause any interference in nearby electronic equipment.	
RF emissions	Class B	The MR2416 is suitable for use in all	
CISPR 11		establishments, including domestic	
Harmonic emissions	Class D	the public low-voltage power supply network that	
IEC 61000-3-2		supplies buildings used for domestic purposes

Electrostatic discharge (ESD) IEC 61000-4-2	±6 kV contact ±8 kV air	±6 kV contact ±8 kV air	Floors should be wood, concrete or ceramic tile. If floors are covered with synthetic material, the relative humidity should be at least 30%.
Electrical fast transient/burst IEC 61000-4-4	<u>+</u> 2 kV for power supply lines <u>+</u> 1 kV for input/ output lines	<u>+</u> 2 kV for power supply lines <u>+</u> 1 kV for input/ output lines	Mains power quality should be that of a typical commercial or hospital environment.

Voltage dips, short interruptions and voltage variations on power supply input lines IEC 61000-4-11			Mains power quality should be that of a typical commercial or hospital environment. If the user of the MR2416 requires continued operation during power mains interruptions, it is recommended that the MR2416 be powered from an uninterruptible power supply or a battery.
Power frequency (50/60 Hz) magnetic field IEC 61000-4-8	3 A/m	3 A/m	Power frequency magnetic fields should be at least characteristic of a typical location in a typical commercial or hospital environment.
Conducted RF IEC 61000-4-6 Radiated RF IEC 61000-4-3	3 Vrms 150 kHz to 80 MHz 3 V/m 80 MHz to 2.5 GHz	3 Vrms 3 V/m	Portable and mobile RF communications equipment should be used no closer to any part of the OEV262H, including cables, than the recommended separation distance calculated from the equation appliance to the frequency of the transmitter. Recommended separation distance: $d = 1.2 \sqrt{P}$ $d = 1.2 \sqrt{P}$ 80 MHz to 800 MHz $d = 2.3 \sqrt{P}$ 800 MHz to 2.5 GHz Where P is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and d is the recommended separation distance in meters (m). Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey ^a , should be less than the compliance level in each frequency range ^b . Interference may occur in the vicinity of equipment marked with following symbol:

NOTE: At 80 MHz and 800 MHz, the higher frequency range applies.

NOTE: These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

a. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the MR2416 is used exceeds the applicable RF compliance level above, the MR2416 should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the MR2416.

b. Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.

Recommended separation distance

The MR2416 display is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer of the user or the MR2416 display can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the MR2416 display as recommended below, according to the maximum output power of the communications equipment.

Rated maximum	Separation distance according to frequency of transmitter (m)			
output power of	150kHz to 80MHz	80MHz to 800MHz	800MHz to 2.5GHz	
transmitter (w)	d=1.2√P	d=1.2√P	d=2.3√P	
0.01	0.12	0.12	0.23	
0.1	0.38	0.38	0.73	
1	1.2	1.2	2.3	
10	3.8	3.8	7.3	
100	12	12	23	

For transmitters rated at a maximum output power not listed above, the recommended separation distance "d" in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where "P" is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

NOTE: At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

NOTE: These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

Package Contents

Your monitor ships with the components shown below. Ensure that you have received all the components and Contact Dell if something is missing.

NOTE: Some items may be optional and may not ship with your monitor. Some features or media may not be available in certain countries.

Product Features

The **Dell MR2416** flat panel medical display has an active matrix, Thin-Film Transistor (TFT), Liquid Crystal Display (LCD) and LED backlight. The monitor features include:

- 60.96 cm (24-inch) viewable area display (measured diagonally).
 1920 x 1200 resolution, plus full-screen support for lower resolutions.
- Wide viewing angle to allow viewing from a sitting or standing position, or while moving from side-to-side.
- Tilt, swivel, height, and rotate adjustment capabilities.
- Removable stand and Video Electronics Standards Association (VESA™) 100 mm mounting holes for flexible mounting solutions.
- Digital connectivity with DisplayPort and HDMI.
- Equipped with 1 USB upstream port and 2 USB downstream ports.
- Plug and play capability if supported by your system.
- On-Screen Display (OSD) adjustments for ease of set-up and screen optimization.
- Software and documentation media includes an Information File (INF), Image Color Matching File (ICM), and product documentation.
- Dell Display Manager Software included (comes in the CD shipped with the monitor).
- Security lock slot and cable clip.
- Capability to switch from wide aspect to standard aspect ratio while maintaining the image quality.
- BFR/PVC/CFR-free (Halogen-free) excluding the external cables and power adapter.
- Meets NFPA 99 leakage current requirements.
- Arsenic-Free glass and Mercury-Free for the panel only.
- 0.5 W standby power when in the sleep mode.
- Energy Gauge shows the energy level being consumed by the monitor in real time.
- Analog backlight dimming control for flicker free display.
- Cleanable design with IP32 rated for front cover glass and back.
- DICOM (Digital Imaging and Communications in Medicine) part-14 GFDS for accurate grayscale reproducibility. DICOM calibrated luminance at 180 cd/m².
- FDA Class I and medical grade display.
- Integrated backlight sensing for brightness stabilization.
- Hard coat and anti-reflective front cover glass.
- Cable security and management.
- 10-bit LUT and color processing.
- White housing for visible dried blood stains detection.

Power Management Modes

If you have VESA's DPMTM compliance display card or software installed in your PC, the monitor can automatically reduce its power consumption when not in use. This is referred to as *Power Save Mode**. If the computer detects input from the keyboard, mouse, or other input devices, the monitor automatically resumes functioning. The following table shows the power consumption and signaling of this automatic power saving feature.

VESA Modes	Horizontal Sync	Vertical Sync	Video	Power Indicator	Power Consumption
Normal operation	Active	Active	Active	Green	47 W (maximum)** 29 W (typical)
Active-off mode	Inactive	Inactive	Blanked	Amber	Less than 0.5 W
Switch off	-	-	-	Amber	Less than 0.5 W

* Zero power consumption in OFF mode can only be achieved by disconnecting the main cable from the monitor.

** Maximum power consumption with max luminance, and USB active.

The OSD functions only in the normal operation mode. When any button is pressed in the Active-off mode, the following message will be displayed:

Dell MR2416	
grag 😰 — No Walk signal from your device. Press any leav on the leavboard or move the mouse or easies it up.	
If there is no display, press the monitor butten again to actest the correct	
input source.	

NOTE: The message may be slightly different according to the connected input signal.

Activate the computer and the monitor to gain access to the OSD.

Plug and Play Capability

You can install the monitor in any Plug and Play-compatible system. The monitor automatically provides the computer system with its Extended Display Identification Data (EDID) using Display Data Channel (DDC) protocols so the system can configure itself and optimize the monitor settings. Most monitor installations are automatic; you can select different settings if desired. For more information about changing the monitor settings, see Operating the Monitor.

Universal Serial Bus (USB) Interface

This section gives you information about the USB ports that are available on the monitor.

NOTE: This monitor is High-Speed USB 2.0 compatible.

Transfer Speed	Data Rate	Power Consumption*
High speed	480 Mbps	2.5 W (Max, each port)
Full speed	12 Mbps	2.5 W (Max, each port)
Low speed	1.5 Mbps	2.5 W (Max, each port)

NOTE: USB 2.0 functionality requires a USB 2.0-capable computer.

NOTE: The monitor's USB interface works only when the monitor is On or in the power save mode. If you turn Off the monitor and then turn it On, the attached peripherals may take a few seconds to resume normal functionality.

LCD Monitor Quality and Pixel Policy

During the LCD Monitor manufacturing process, it is not uncommon for one or more pixels to become fixed in an unchanging state which are hard to see and do not affect the display quality or usability. For more information on Dell Monitor Quality and Pixel Policy, see Dell Support site at: http://www.dell.com/support/monitors.

Cleaning Your Monitor

CAUTION: Read and follow the Safety Instructions before cleaning the monitor.

CAUTION: Do not pour or spray any liquid directly on the device or permit fluid to seep into connections or openings.

WARNING: Before cleaning the monitor, unplug the monitor power cable from the electrical outlet.

For best practices, follow the instructions in the list below while unpacking, cleaning, or handling your monitor:

- For cleaning and disinfecting the exterior surface (including the cover glass) of the monitor, wipe the surface with a soft lint-free, lightly moistened cloth with up to 75% concentrated ethyl alcohol solution. Do not use strong alkali, strong solvents, acid and abrasive cleaning tools such like steel wool, steel blades and sponge with abrasives for cleaning to prevent damage and scratches to the monitor surface.
- Wipe off cleaning solutions with a clean and dry lint-free cloth if necessary.

WARNING: Before you begin any of the procedures in this section, follow the Safety Instructions.

WARNING: The monitor is to be set up only by qualified personnel.

The following sections provide information about connecting your monitor to the computer. Please read carefully and follow the instructions given below to complete the monitor setup.

Connecting Your Monitor

NOTE: If your computer is turned on, turn it Off and disconnect the power cable before you start the following procedures.

1 Remove the monitor protective cover and place the monitor with its front facing downward on it.

2 Use a Phillips crosshead screwdriver to loose the screw securing the cable clip.

3 Open the cable clip, as illustrated in the figure below.

4 Connect the necessary cables to the monitor.

- a Power cable
- **b** DP cable
- c HDMI cable
- **d** VGA cable

1

4

- e USB upstream cable
- f USB downstream cables (optional, cable not included)

NOTE: Ensure that the cables are placed in a balanced arrangement.

5 Tighten the cable clip screw with a Phillips crosshead screwdriver to secure all the connected cables.

WARNING: Do not plug-in or turn-on the power to the monitor until you are instructed to do so.

Ø

NOTE: Read and follow the procedures in the following sections to continue setting up the monitor.

Attaching the Cable Cover

NOTE: The cable cover is detached when the monitor is shipped from the factory.

WARNING: Before turning on the power to the monitor, make sure the cable cover is well attached.

- 1 Fit the three tabs on the upper part of the cable cover to the groove on the back of the monitor.
- 2 Press the cable cover till it snaps into place.

Attaching the Stand

NOTE: The stand is detached when the monitor is shipped from the factory.

NOTE: This is applicable for a monitor with a stand. When any other stand is bought, please refer to the respective stand setup guide for the set up instructions.

WARNING: Do not plug-in or turn-on the power to the monitor until you are instructed to do so.

To attach the monitor stand:

- 1 Insert the two tabs on the upper part of the stand to the groove on the back of the monitor.
- 2 Press the stand till it snaps into place.

3 Hold the stand base with the triangle mark, $\underline{\blacktriangle}$, facing upward. Then, align the stand base protruded blocks to the matching slot on the stand.

4 Insert the stand base blocks fully into the stand slot.

5 Lift the screw handle and turn the screw clockwise.

6 After fully tighten the screw, fold the screw handle flat within the recess.

Organizing Your Cables

After attaching all necessary cables (see Organizing Your Cables), the cable cover (see Attaching the Cable Cover), and the monitor stand (see Attaching the Stand), organize all cables as shown above.

Connecting the Computer

To connect the monitor to your computer:

NOTE: See also Connecting Your Monitor.

- 1 Plug the other end of the connected VGA or DP or HDMI cable to your computer.
- 2 Plug the USB upstream cable to an appropriate USB 2.0 port on your computer.
- **3** Connect the USB 2.0 peripherals to the downstream USB 2.0 ports on the monitor.
- 4 Plug the power cables for your computer and monitor into a nearby outlet.
- **5** Turn On the monitor and the computer.

CAUTION: The graphics are used for the purpose of illustration only. Appearance of the computer may vary.

Securing Your Monitor

It is recommended that you purchase a Kensington lock to prevent theft and unwanted access to your monitor. Before inserting the lock into the Kensington slot, please remove the plastic strip covering the Kensington lock slot.

NOTE: Please read the user guide for the Kensington lock you purchased to learn how to use it.

Removing the Monitor Stand

NOTE: This is applicable for a monitor with a stand. When any other stand is bought, please refer to the respective stand setup guide for the set-up instructions.

To remove the stand:

- 1 Place the monitor on a soft cloth or cushion.
- 2 Press and hold the stand release button.
- **3** Lift the stand up and away from the monitor.

Removing the Cable Cover

- 1 Gently pull and stretch out the edge of the cable over.
- 2 Remove the three tabs on the upper part of the cable cover from the groove on the back of the monitor.

Wall Mounting (Optional)

(Screw dimension: M4 x 10 mm).

Refer to the instructions that come with the VESA-compatible wall mounting kit.

- 1 Place the monitor panel on a soft cloth or cushion on a stable, flat table.
- 2 Remove the stand.
- **3** Use a Phillips crosshead screwdriver to remove the four screws securing the plastic cover.
- 4 Attach the mounting bracket from the wall mounting kit to the monitor.
- **5** Mount the monitor on the wall by following the instructions that comes with the wall mounting kit.

NOTE: For use only with UL-listed wall mount bracket with minimum weight/load bearing capacity of 5.0 kg.

Power On the Monitor

WARNING: Always make sure your hands are dry when operating the monitor.

Press the Power button to turn On the monitor.

Using the Side Panel Controls

Use the control buttons on the side of the monitor to adjust the characteristics of the image being displayed. As you use these buttons to adjust the controls, an OSD shows the numeric values of the characteristics as they change.

The following table describes the side panel buttons:

OSD Warning Messages

When the monitor does not support a particular resolution mode, you will see the following message:

This means that the monitor cannot synchronize with the signal that it is receiving from the computer. See Monitor Specifications for the Horizontal and Vertical frequency ranges addressable by this monitor. Recommended mode is 1920 x 1200.

You will see the following message before the DDC/CI function is disabled:

When the monitor enters the **Power Save** mode, the following message appears:

-				

Activate the computer and wake up the monitor to gain access to the OSD.

If you press any button other than the power button, the following message will appear depending on the selected input:

NOTE: The message may be slightly different according to the connected input signal.

If either VGA, HDMI, or DP input is selected and the corresponding cable is not connected, a floating dialog box as shown below appears.

Use only the supplied power adapter to connect to this monitor and AC mains. Using adapter other than the one supplied may cause malfunction and damage to the monitor, the following error massage will appear:

Setting the Maximum Resolution

To set the maximum resolution for the monitor:

In Windows[®] 7, Windows[®] 8, Windows[®] 8.1, and Windows[®] 10:

- 1 For Windows[®] 8 and Windows[®] 8.1 only, select the Desktop tile to switch to classic desktop.
- 2 Right-click on the desktop and click **Screen Resolution**.
- 3 Click the Dropdown list of the Screen Resolution and select **1920 x 1200**.
- 4 Click OK.

If you do not see 1920 x 1200 as an option, you may need to update your graphics driver. Depending on your computer, complete one of the following procedures:

If you have a Dell desktop or portable computer:

• Go to http://www.dell.com/support, enter your service tag, and download the latest driver for your graphics card.

If you are using a non-Dell computer (portable or desktop):

- Go to the support site for your computer and download the latest graphic drivers.
- Go to your graphics card website and download the latest graphic drivers.

Using the Tilt, Swivel, and Vertical Extension

NOTE: This is applicable for a monitor with a stand. When any other stand is bought, please refer to the respective stand setup guide for set up instructions.

Tilt, Swivel

With the stand attached to the monitor, you can tilt and swivel the monitor for the most comfortable viewing angle.

NOTE: The stand is detached when the monitor is shipped from the factory.

Vertical Extension

NOTE: The stand extends vertically up to 130 mm. The figure below illustrates how to extend the stand vertically.

Rotating the Monitor

Before you rotate the monitor, your monitor should be fully vertically extended (Vertical Extension) and fully tilted up to avoid hitting the bottom edge of the monitor.

Rotate clockwise

- **NOTE:** To use the Display Rotation function (Landscape versus Portrait view) with your Dell computer, you require an updated graphics driver that is not included with this monitor. To download the graphics driver, go to **www.dell.com/support** and see the **Download** section for **Video Drivers** for latest driver updates.
- **NOTE:** When in the *Portrait View Mode*, you may experience performance degradation in graphic-intensive applications (3D Gaming and etc.).

Adjusting the Rotation Display Settings of Your System

After you have rotated your monitor, you need to complete the procedure below to adjust the Rotation Display Settings of your system.

NOTE: If you are using the monitor with a non-Dell computer, you need to go the graphics driver website or your computer manufacturer website for information on rotating the 'contents' on your display.

To adjust the Rotation Display Settings:

- 1 Right-click on the desktop and click **Properties**.
- 2 Select the **Settings** tab and click **Advanced**.
- **3** If you have an ATI graphics card, select the **Rotation** tab and set the preferred rotation.
- 4 If you have an nVidia graphics card, click the **nVidia** tab, in the left-hand column select **NVRotate**, and then select the preferred rotation.
- 5 If you have an Intel[®] graphics card, select the **Intel** graphics tab, click **Graphic Properties**, select the **Rotation** tab, and then set the preferred rotation.

NOTE: If you do not see the rotation option or it is not working correctly, go to **www.dell.com/support** and download the latest driver for your graphics card.

WARNING: Before you begin any of the procedures in this section, follow the Safety Instructions.

Self-Test

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

- **1** Turn off both your computer and the monitor.
- **2** Unplug the video cable from the back of the computer. To ensure proper Self-Test operation, remove all digital cables from the back of computer.
- **3** Turn on the monitor.

The floating dialog box should appear on-screen (against a black background), if the monitor cannot sense a video signal and is working correctly. While in self-test mode, the power LED remains green. Also, depending upon the selected input, one of the dialogs shown below will continuously scroll through the screen.

or

or

- **4** This box also appears during normal system operation, if the video cable becomes disconnected or damaged.
- **5** Turn Off your monitor and reconnect the video cable; then turn On both your computer and the monitor.

If your monitor screen remains blank after you use the previous procedure, check your video controller and computer, because your monitor is functioning properly.

Built-in Diagnostics

Your monitor has a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with your monitor, or with your computer and video card.

NOTE: You can run the built-in diagnostics only when the video cable is unplugged and the monitor is in *self-test mode*.

To run the built-in diagnostics:

- 1 Ensure that the screen is clean (no dust particles on the surface of the screen).
- 2 Unplug the video cable(s) from the back of the computer or monitor. The monitor then goes into the self-test mode.
- **3** Press and hold **Button 1** and **Button 4** on the side panel simultaneously for 2 seconds. A gray screen appears.
- 4 Carefully inspect the screen for abnormalities.
- 5 Press **Button 4** on the side panel again. The color of the screen changes to red.
- 6 Inspect the display for any abnormalities.

7 Repeat steps 5 and 6 to inspect the display in red, green, blue, black, white and text screens.

The test is complete when the text screen appears. To exit, press **Button 4** again.

If you do not detect any screen abnormalities upon using the built-in diagnostic tool, the monitor is functioning properly. Check the video card and computer.

Common Problems

The following table contains general information about common monitor problems you might encounter and the possible solutions:

Common Symptoms	What You Experience	Possible Solutions
No Video/Power LED off	No picture	 Ensure that the video cable connecting the monitor and the computer is properly connected and secure. Verify that the power outlet is functioning properly using any other electrical equipment. Ensure that the power button is depressed fully. Ensure that the correct input source is selected in the Input Source menu.
No Video/Power LED on	No picture or no brightness	 Increase brightness & contrast controls via OSD. Perform monitor self-test feature check. Check for bent or broken pins in the video cable connector. Run the built-in diagnostics. Ensure that the correct input source is selected in the Input Source menu.
Poor Focus	Picture is fuzzy, blurry, or ghosting	 Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Eliminate video extension cables. Reset the monitor to factory settings. Change the video resolution to the correct aspect ratio.
Shaky/Jittery Video	Wavy picture or fine movement	 Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Reset the monitor to factory settings. Check environmental factors. Relocate the monitor and test in another room.
Missing Pixels	LCD screen has spots	 Cycle power On-Off. Pixel that is permanently Off is a natural defect that can occur in LCD technology. For more information on Dell Monitor Quality and Pixel Policy, see Dell Support site at: http://www.dell.com/support/monitors.

Stuck-on Pixels	LCD screen has bright spots	 Cycle power On-Off. Pixel that is permanently off is a natural defect that can occur in LCD technology. For more information on Dell Monitor Quality and Pixel Policy, see Dell Support site at: http://www.dell.com/support/monitors.
Brightness Problems	Picture too dim or too bright	 Reset the monitor to factory settings. Perform Auto Adjust via OSD. Adjust brightness & contrast controls via OSD.
Geometric Distortion	Screen not centered correctly	 Reset the monitor to factory settings. Perform Auto Adjust via OSD. Adjust horizontal & vertical controls via OSD. NOTE: When using HDMI/DisplayPort input, the positioning adjustments are not available.
Horizontal/ Vertical Lines	Screen has one or more lines	 Reset the monitor to factory settings. Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Perform monitor self-test feature check and determine if these lines are also in self-test mode. Check for bent or broken pins in the video cable connector. Run the built-in diagnostics. NOTE: When using HDMI/DisplayPort input, the Pixel Clock and Phase adjustments are not available.
Synchronization Problems	Screen is scrambled or appears torn	 Reset the monitor to factory settings. Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Perform monitor self-test feature check to determine if the scrambled screen appears in self-test mode. Check for bent or broken pins in the video cable connector. Restart the computer in the safe mode.
Safety Related Issues	Visible signs of smoke or sparks	Do not perform any troubleshooting steps.Contact Dell immediately.

Setting Up Your Monitor

Setting the display resolution

For maximum display performance with Microsoft[®] Windows[®] operating systems, set the display resolution to **1920 x 1200** pixels by performing the following steps:

In Windows[®] 7, Windows[®] 8, Windows[®] 8.1, and Windows[®] 10:

- 1 For Windows[®] 8 and Windows[®] 8.1 only, select the Desktop tile to switch to classic desktop.
- 2 Right-click on the desktop and click Screen Resolution.
- 3 Click the Dropdown list of the Screen Resolution and select **1920 x 1200**.
- 4 Click OK.

If you do not see the recommended resolution as an option, you may need to update your graphics driver. Please choose the scenario below that best describes the computer system you are using, and follow the given steps.

If you have a Dell[™] desktop or a Dell[™] portable computer with internet access

- **1** Go to **www.dell.com/support**, enter your service tag, and download the latest driver for your graphics card.
- After installing the drivers for your graphics adapter, attempt to set the resolution to 2 **1920 x 1200** again.

NOTE: If you are unable to set the resolution to 1920 x 1200, please contact Dell[™] to inquire about a graphics adapter that supports these resolutions.

If you have a non Dell[™] desktop, portable computer, or graphics card

In Windows[®] 7, Windows[®] 8, Windows[®] 8.1, and Windows[®] 10:

- For Windows[®] 8 and Windows[®] 8.1 only, select the Desktop tile to switch to classic 1 desktop.
- Right-click on the desktop and click **Personalization**. 2
- 3 Click Change Display Settings.
- 4 Click Advanced Settings.
- Identify your graphics controller supplier from the description at the top of the 5 window (e.g. NVIDIA, ATI, Intel etc.).
- 6 Refer to the graphic card provider website for updated driver (for example, http://www.ATI.com OR http://www.NVIDIA.com).
- 7 After installing the drivers for your graphics adapter, attempt to set the resolution to 1920 x 1200 again.

NOTE: If you are unable to set the recommended resolution, please contact the manufacturer of your computer or consider purchasing a graphics adapter that will support the video resolution.
