#### Overview

Dell Display Manager (DDM) is a Microsoft Windows application used to manage a monitor or a group of monitors. It allows manual adjustment of the displayed image, assignment of automatic settings, energy management, window organization, image rotation, and other features on selected Dell monitors. Once installed, Dell Display Manager runs each time the system starts and places its icon in the notification tray. Information about monitors connected to the system is available when hovering over the notification-tray icon.

Alternatively, you may launch DDM by right-clicking on the desktop background to select Dell Display Manager from the desktop menu.

NOTE: Dell Display Manager uses DDC/CI channel to communicate with your monitor. Ensure DDC/CI is enabled in the menu as below.

#### Assigning preset modes to applications

The **Auto Mode** tab allows you to associate a specific **Preset Mode** with a specific application, and apply it automatically. When **Auto Mode** is enabled, Dell Display Manager automatically switches to the corresponding **Preset Mode** whenever the associated application is activated. The **Preset Mode** assigned to a particular application may be the same on each connected monitor, or it can vary from one monitor to another.

Dell Display Manager is pre-configured for many popular applications. To add a new application to the assignment list, simply drag the application from the desktop, Windows Start Menu or elsewhere, and drop it onto the current list.

# NOTE: Preset Mode assignments for batch files, scripts, loaders, and non-executable files such as zip archives or packed files, are not supported.

You can also configure the **Game** preset mode to be used whenever a Direct3D application runs in full-screen mode. To prevent an application from using mode, assign a different preset mode to it.

#### Organizing windows with Easy Arrange

**Easy Arrange** helps you to effectively organize your application windows on the desktop. You first choose a pre-defined layout pattern which suits your work, then you just need to drag the application windows into the defined zones. Press ">" or use Page Up/Page Down key to find more layouts.

To create a custom layout, right-click on the thumbnail with a tiny triangle at the bottom right corner, arrange the numbers of rows and columns in the open window, and then click **OK** to set up your preferred arrangement.

DELL

You can apply different window layouts for each of the virtual desktops.

If you often use Windows snap feature, you can select "**Hold down the SHIFT key to enable zone positioning**". This gives Windows snap priority over **Easy Arrange**. You will then need to hold down the Shift key to use **Easy Arrange** positioning.

If you are using multiple similar monitors in an array or matrix, **Easy Arrange** layout can be applied across to all the monitors as one desktop. Select "**Span multiple monitors**" to enable this feature. You need to align your monitors properly to make it effective.

DELI

There are other advanced ways for the usage of **Easy Arrange**. Refer to the table below.

Feature	Function	Description
Enhanced Easy Arrange	Custom layouts	<ul> <li>Save and name 5 customized Easy Arrange patterns.</li> <li>Configure x*y patterns.</li> </ul>
	6 MRU (most- recently-used) layouts	<ul> <li>Press Ctrl+Shift+Home to cycle among the last 6 MRU layouts.</li> </ul>
	On-the-fly partition resizing	<ul> <li>Hold down Ctrl while resizing current Easy Arrange layout to adjust the size and numbers of cells in a layout.</li> <li>Newly formed Easy Arrange pattern is saved into the Easy Arrange icon position.</li> <li>Hold down Ctrl while clicking on a modified layout icon to restore it to default layout.</li> </ul>
	Easy Arrange layouts for portrait mode	<ul> <li>Portrait mode Easy Arrange icons are presented when monitor is rotated.</li> </ul>

NOTE: Some application requires a minimum effective resolution for its window. The application may not fit in an Easy Arrange zone if the zone is smaller than the required window size.

#### Managing multiple video inputs

The **Input Manager** tab provides convenient ways for you to manage multiple video inputs connected to your Dell monitor. This makes it very easy to switch between inputs while working with multiple computers.

All video input ports available to your monitor are listed. You can give each input a name as you like. Please save your changes after editing.

You can define a shortcut key to quickly switch to your favorite input and another shortcut key to quickly switch between two inputs if you often work between them.

#### **Restoring application positions**

DDM can help you restore application windows into their positions when you reconnect your PC to the monitor(s). You can quickly access this feature by rightclicking on DDM icon in the notification tray.

If you choose "**Auto-restore window layout**", your application windows' positions are tracked and remembered by DDM. DDM automatically puts the application windows into their original positions when you reconnect your PC to your monitor(s).

To go back to a favorite layout, first select **"Save current window layout**" and then **"Restore saved window layout**".

You may use monitors with different models or resolutions in your daily routine, and apply different window layouts on them. DDM is able to know the monitor you have reconnected and restore application positions accordingly.

In case you need to replace a monitor in a monitor matrix configuration, you can save the window layout before replacement and restore the layout after a new monitor is installed.

### NOTE: You should keep your applications running in order to benefit from this feature. DDM doesn't launch applications.

# Attaching DDM to active windows (only Windows 10)

For Windows 10, you can add the DDM shortcut icon to the toolbar region of active windows. To activate this feature, right-click on the DDM icon in the notification tray and choose **Attach to active window** from the opened menu.

	Open Dell Display Manager

	Fait .

Once you right-click the icon in the toolbar, a quick menu of DDM appears, displaying options under **Auto Mode** and **Easy Arrange** for you to easily make adjustments.

### Applying energy conservation features

The **Options** tab provides **PowerNap** energy conservation options and allows you to customize keyboard shortcuts.

In the upper pane, you can choose to set the monitor's brightness to the minimum level, or to put the monitor to sleep when the screensaver is activated.

#### Other shortcut keys

You can define the shortcut keys for quick access to the following DDM functions:

#### Troubleshooting

If DDM cannot work with your monitor, DDM will show the following icon in your notification tray.

Click on the icon, DDM shows a more detailed error message.

Please note that DDM only works with Dell-branded monitors. If you are using monitors from other manufacturers, DDM doesn't support them.

If DDM is unable to detect and/or communicate with a supported Dell monitor, please take the following actions to troubleshoot:

- 1. Make sure the video cable is properly connected to your monitor and your PC, especially the connectors should be firmly inserted into position.
- 2. Check the monitor OSD to ensure DDC/Cl is enabled.
- **3.** Make sure you have the correct and latest display driver from the graphics vendor (Intel, AMD, NVIDIA, etc.). Display driver is often the cause of DDM failure.
- **4.** Remove any docking stations or cable extenders or converters between the monitor and the graphics port. Some low-cost extenders, hubs or converters may not support DDC/CI properly and can fail DDM. Update the driver of such device if the latest version is available.
- 5. Restart your system.

DDM may not work with below monitors:

- Dell monitor models earlier than year 2013 and D-series of Dell monitors. You can refer to Dell Product Support websites for more information
- · Gaming monitors using NVIDIA-based G-sync technology
- · Virtual and wireless displays do not support DDC/CI
- Some early models of DP 1.2 monitors, it may be necessary to disable MST/ DP 1.2 using the monitor OSD

If your PC is connected to the Internet, you will be prompted with a message when a newer version of DDM application is available. It is recommended to download and install the latest DDM application.

You may also check for a new version by right-clicking on DDM icon while pressing and holding the 'shift' key.
