Chapter 5 Troubleshooting

If a problem still remains after applying the suggested remedies, contact your local EIZO representative.

5-1. No picture

Problem	Possible cause and remedy
1. No picture Power indicator does not light.	- Check whether the power cord is connected properly. - Turn the main power switch on. - Press . - Turn off the main power, and then turn it on again a few minutes later.
Power indicator is lighting blue.	Increase <Brightness>, <Contrast>, and/or <Gain> in the Adjustment menu (see “To perform advanced adjustments” (page 15)).
Power indicator is lighting orange.	- Switch the input signal with . - Operate the mouse or keyboard. - Check whether the PC is turned on.
2. The message below appears.	This message appears when the signal is not input correctly even when the monitor functions properly.
This message appears when no signal is input.	
	- The message shown left may appear, because some PCs do not output the signal soon after power-on. - Check whether the PC is turned on. - Check whether the signal cable is connected properly. - Switch the input signal with .
	- Check whether the network cable is connected properly. - Check the network configuration. - Check the network environment. - Switch the input signal with .
	Check the network status.
The message shows that the input signal is out of the specified frequency range. (Such signal frequency is displayed in red.) Example:	- Check whether the PC is configured to meet the resolution and vertical scan frequency requirements of the monitor (see “Compatible Resolutions” (page 32)). - Reboot the PC. - Select an appropriate setting using the graphics board's utility. Refer to the manual of the graphics board for details.
 fH: Horizontal Scan Frequency fV: Vertical Scan Frequency	

5-2. Imaging problems

Problem	Possible cause and remedy
1. The screen is too bright or too dark.	- Use <Brightness> or <Contrast> in the Adjustment menu to adjust it. (The LCD monitor backlight has a limited life span. When the screen becomes dark or begins to flicker, contact your local EIZO representative.) - Turn on the Auto EcoView function. The monitor detects the environmental brightness to adjust the screen brightness automatically.
2. Characters are blurred.	- Check whether the PC is configured to meet the resolution and vertical scan frequency requirements of the monitor (see “Compatible Resolutions” (page 32)). - When an image is displayed with a resolution other than recommended, the characters or lines of the displayed image may blur. Use <Smoothing> in the Adjustment menu to adjust it (see “To modify blurred characters/lines” (page 14)).
3. Afterimages appear.	- Afterimages are particular to LCD monitors. Avoid displaying the same image for a long time. - Use the screen saver or power save function to avoid displaying the same image for extended periods of time.
4. Green/red/blue/white dots or defective dots remain on the screen.	This is due to LCD panel characteristics and is not a failure.
5. Interference patterns or pressure marks remain on the screen.	Leave the monitor with a white or black screen. The symptom may disappear.
6. The screen is whitish or blackish.	Use <Contrast> in the Adjustment menu to adjust it (see “To adjust contrast” (page 16)).
7. Animated images are not displayed smoothly. (for network connection only)	- There may be too much load on your network. If you are playing a video or using an application that changes the screen dynamically, set a lower resolution level. - With a wireless LAN connection, the transmission strength of the electric wave may be weak. Check the electric wave strength of the monitor. For details on the transmission strength of the electric wave, see the NetDA Manager User's Manual (on the CD-ROM). - Depending on the performance of the PC in use, the problem presented on the left may occur.
8. Display position is incorrect. (for analog connection only) 	- Use <Position> in the Adjustment menu to correct the image position (see “To correct the screen position” (page 13)). - If the problem persists, use the graphics board's utility if available to change the display position.
9. Vertical bars appear on the screen or a part of the image is flickering. (for analog connection only) 	Use <Clock> in the Adjustment menu to adjust it (see “To eliminate vertical bars” (page 12)).

Problem	Possible cause and remedy
10. Whole screen is flickering or blurring. (for analog connection only) 	Use <Phase > in the Adjustment menu to adjust it (see “To remove flickering or blurring” (page 13)).

5-3. Network connection problems

If there is a problem with network connection, refer to the NetDA Manager User's Manual (on the CD-ROM).

5-4. Other problems

Problem	Possible cause and remedy
1. The adjustment menu does not appear.	Check whether the operation lock function is active (see “3-5. Locking Operation Buttons” (page 19)).
2. All control buttons are disabled.	Check whether the operation lock function is active (see “3-5. Locking Operation Buttons” (page 19)).
3. The auto adjustment function does not work.	- This function does not work during network connection. - This function is intended for use on the Macintosh and on AT-compatible PC running Windows. It does not work properly when an image is displayed only on a part of the screen (command prompt window, for example) or when a black background (wallpaper, etc.) is in use. - This function does not work correctly with some graphics boards.
4. No audio output.	- Check whether volume is set to 0. - Check the PC and audio playback software to see whether they are configured correctly. - Audio output from the monitor is possible only when the monitor is linked to a PC via a network. Audio output from a PC connected using an analog signal cable is not supported. - Check the “Device Filter” setting of the network. If “Audio Device Connection” is set to “DISABLE”, audio output via a network is not possible (see the NetDA Manager User's Manual (on the CD-ROM)). Change the setting to “ENABLE” and then click “Connect” () to establish a connection between the monitor and PC again.
5. Neither Blu-ray nor digital broadcasting images can be played.	This product is not applicable to HDCP. Therefore, DRM (Digital Rights Management) movies cannot be played.
6. Neither the mouse nor the keyboard works. (for network connection only)	Even when connecting an USB device to the monitor with the monitor connected to the PC, the connection is not established over a network. It is necessary to click “Connect” () to establish the connection between the monitor and PC again.

5-5. Touch panel problems (for FDS1702NT only)

Attention

- For information on how to install or use the touch panel driver, see the Touch Panel Driver User's Manual (on the CD-ROM).

Problem	Possible cause and remedy
1. Cursor position is not correct. / Cursor jumps.	• Turn off and on the monitor. If the symptom is not improved, perform the calibration on the monitor. • Touch with one finger only.
2. Touch operation is not effective.	• Other login user may have changed the setting. Set the touch panel driver again. • Restart "DMC Touch Panel Configuration", or reboot the PC. • If using Windows 7, Windows Vista, or Windows XP, check whether "Use EEPROM" in the "Device" menu is not checked in the "Properties" settings of the touch panel driver screen. If the check is already applied, perform the calibration.
3. Some deflection may appear on the surface of touch panel portion.	• Due to the touch panel structural characteristics, the deflection may occur on the touch panel surface in high temperature/high humidity operating environment. This is not a trouble.

Chapter 6 Reference

6-1. How to Attach the Optional Arm

An optional arm (or an optional stand) can be attached by removing the stand section. Please refer to our web site for the corresponding optional arm (or optional stand). <http://www.eizoglobal.com>

Attention

- When attaching an arm or stand, follow the instructions of their user's manual.
- When using another manufacturer's arm or stand, confirm the following in advance and select one conforming to the VESA standard. Use the screws securing the unit and the stand.
 - Clearance between the screw holes: 100 mm × 100 mm
 - Thickness of plate: 2.6 mm
 - Strong enough to support weight of the monitor unit (except the stand) and attachments such as cables.
- When using an arm or stand, attach it to meet the following tilt angles of the monitor.
 - Up 45°, down 45°
- Do not turn the monitor in the vertical direction.
- Connect the cables after attaching an arm or stand.
- The monitor and arm or stand are heavy. Dropping them may result in injury or equipment damage.

Procedure

1. Lay the LCD monitor on a soft cloth spread over on a stable surface with the panel surface facing down.

2. Remove the stand.

Prepare a screwdriver. Loosen the screws (four) securing the unit and the stand with the screwdriver.

3. Attach the arm or stand to the monitor.

Secure the monitor to the arm or stand using the screws specified in the user's manual of the arm or stand.

6-2. Displaying Monitor Information

This function allows you to display the input signal status, current resolution, model name, and power saving level.

Information 1/4: Input signal status, resolution, and horizontal/vertical scan frequencies

Information 2/4: DDC/CI Enable/Disable status

Information 3/4: Model name, serial number, and usage time

Information 4/4: EcoView Index (Power reduction, CO₂ reduction, power saving level indicators)

Procedure

1. Choose <Information> from the Adjustment menu, and press .

The <Information> menu appears.

2. Then, press  to check settings, etc.

Attention

- When you turn on the monitor for the first time, the usage time may be more than 0 due to a factory inspection.

Note

- Power reduction: the backlight's reduction of electricity consumption as a result of the adjusted brightness value.
- CO₂ reduction: converted from the "Power reduction" value, this is an estimate of the quantity of CO₂ emissions reduced when using the monitor for 1 hour.
 - * The numeric value is a result of a calculation based on a default value (0.000555 t-CO₂/kWh) determined by a ministerial ordinance (2006, Ministry of Economy, Trade and Industry, Ministry of Environment, civil code article 3) and may differ depending on country and year.
- Indicator: The power saving ratio comes to high as the indicator level meter lights towards right.

6-3. Displaying Network Configuration Information

This function allows you to display the network configuration, wireless LAN configuration, and target PC configuration.

Attention

- The information is displayed only when the monitor is not linked to a PC.

Procedure

1. The information switches each time  is pressed.

("Network Configuration" → "Wireless Configuration" → "Target Configuration")

6-5. Glossary

Access Point

Access points are devices to be installed so that links to other networks such as wireless LAN devices and/or wired LAN are possible.

Clock

The analog signal input monitor needs to reproduce a clock of the same frequency as the dot clock of the graphics system in use, when the analog signal is converted to a digital signal for image display. This is called clock adjustment. If the clock pulse is not set correctly, some vertical bars appear on the screen.

DDC/CI (Display Data Channel/Command Interface)

VESA provides the standardization for the interactive communication of the setting information, etc. between a PC and the monitor.

DHCP (Dynamic Host Configuration Protocol)

The DHCP is used to automatically assign necessary information such as an IP address to a PC which will be connected temporarily to a network. In the DHCP, PCs and network devices with the function presenting the configuration information are referred to as DHCP servers. (This product is configured to start as a DHCP server by default.)

DVI (Digital Visual Interface)

DVI is a digital interface standard. DVI allows direct transmission of the PC's digital data without loss. This adopts the TMDS transmission system and DVI connectors. There are two types of DVI connectors. One is a DVI-D connector for digital signal input only. The other is a DVI-I connector for both digital and analog signal inputs.

DVI DMPM (DVI Digital Monitor Power Management)

DVI DMPM is a digital interface power-saving function. The "Monitor ON (operating mode)" and "Active Off (power-saving mode)" are indispensable for DVI DMPM as the monitor's power mode.

Ethernet Address

An Ethernet address is a 48bit identification number assigned to a network device. It is assigned statically, not duplicated, and uses a unique number for each network device. It is also referred to as MAC address

Gain

This is used to adjust each color parameter for red, green and blue. An LCD monitor displays the color by the light passing through the panel color filter. Red, green and blue are the three primary colors. All the colors on the screen are displayed by combining these three colors. The color tone can be changed by adjusting the light intensity (volume) passing through each color's filter.

HDCP (High-bandwidth Digital Content Protection)

Digital signal coding system developed to copy-protect the digital contents, such as video, music, etc. This helps to transmit the digital contents safely by coding the digital contents sent via the DVI or HDMI connector on the output side and decoding them on the input side. Any digital contents cannot be reproduced if both of the equipments on the output and input sides are not applicable to HDCP system.

IEEE802.11

One of the wireless LAN standards provided by the IEEE (Institute of Electrical and Electronic Engineers): This product complies with the following 4 standards.

Standards	Frequency band	Transmission speeds (Max.)
IEEE 802.11a	5GHz band	54Mbps
IEEE 802.11b	2.4GHz band	11Mbps
IEEE 802.11g	2.4GHz band	54Mbps
IEEE 802.11n	2.4GHz band/5GHz band	300Mbps

MAC (Media Access Control) Address

See “Ethernet Address”.

Phase

Phase means the sampling timing to convert the analog input signal to a digital signal. Phase adjustment is made to adjust the timing. It is recommended that phase adjustment be made after the clock is adjusted correctly.

Range Adjustment

Range adjustment controls the signal output levels to display every color gradation. It is recommended that range adjustment be made before color adjustment.

Resolution

The LCD panel consists of numerous pixels of specified size, which are illuminated to form images. This monitor consists of 1280 horizontal pixels and 1024 vertical pixels. At a resolution of 1280×1024 , all pixels are illuminated as a full screen (1:1).

sRGB (Standard RGB)

International standard for color reproduction and color space among peripheral devices (such as monitors, printers, digital cameras, scanners). As a form of simple color matching for the Internet, colors can be displayed using tones close to those of the transmission and reception devices.

SSID (Service Set Identifier)

The SSID is a name which allows the relevant access point to be identified in a wireless LAN. When multiple access points exist, the access point to be linked can be specified. Any alphanumeric characters can be specified up to a maximum of 32 characters.

Subnet Mask

A subnet mask is a numeric value where the network address part identifying the subnet can be specified in an IP address.

(Subnet: a divided network when controlling a large network by dividing into multiple networks)

TCP/IP (Transmission Control Protocol/Internet Protocol)

The TCP/IP is one of the network protocols for network communication. Using the TCP/IP protocols allows communication in various OSes.

Temperature

Color temperature is a method to measure the white color tone, generally indicated in degrees Kelvin. The screen becomes reddish at a low temperature, and bluish at a high temperature, like the flame temperature.

5000K: Slightly reddish white

6500K: White referred to as daylight-balanced color

9300K: Slightly bluish white

TMDS (Transition Minimized Differential Signaling)

TMDS is one of the signal transmission methods for the digital interface.

VESA DPM (Video Electronics Standards Association - Display Power Management)

VESA specifications achieve increased energy efficiency for computer monitors. This involves standardization of signals sent from the computer (graphics board).

DPM defines the status of signals transmitted between the computer and monitor.

10BASE-T, 100BASE-TX, 1000BASE-T

One of the Ethernet standards provided by the IEEE: This product complies with the following 3 standards.

Standards	Transmission speeds
IEEE802.3 (10BASE-T)	10Mbps
IEEE802.3u (100BASE-TX)	100Mbps
IEEE802.3ab (1000BASE-T)	1000Mbps

6-6. Preset Timing

The following table shows factory preset analog signal timing:

Attention

- Display position may be deviated depending on the PC connected, which may require screen adjustment using Adjustment menu.
- If a signal other than those listed in the table is input, adjust the screen using the Adjustment menu. However, screen display may still be incorrect even after the adjustment.
- When interlace signals are used, the screen cannot be displayed correctly even after screen adjustment using the Adjustment menu.
